

Milestone 4:

Team Tyrannosaurus: Dylan Painter, Shirley Qi, Vicky Xie, AJ Reiter

Current State of Project:

- Project is complete, all templates have been finished, prediction accuracies are displayed for all templates.
- The website is running as desired.
- The final report and video are completed.

Feature Changes:

- In the last milestone, we stated that we would try to separate the website from google colab, so that it may run on the command line instead. We chose however, to leave the website on colab, as it already achieved the functionality we wanted and figured it was fine to leave it there. This decision allowed us to spend more time creating the report and video instead.
- The website itself has no feature changes, it matches the proposal.
- There are no feature changes that changes the functionality of our project, but some templates and notebooks have been updated due to reorganization/deletion of any extra code (such as comments, code for other testing purposes that we did not use or bugs that we noticed when checking over all the files)

Challenges and Bottlenecks:

- At first, it was a challenge to decide how to film the video. We decided between recording on Zoom or have each teammate film a portion of the video. We ultimately decided on individually filming as we can easily restart the recording if we make a mistake without having to re-record the entire video with everybody there.

Tasks completed by each member since last milestone:

Dylan:

- Recorded 1st part of video (walkthrough example of pokedex in use)
- Wrote description

Shirley:

- Wrote the walkthrough portion of the report/partially wrote description
- Created figure 7 of report
- Recorded 4th part of video (how the accuracies move from the backend to the frontend)

Vicky:

- Write the draft of the module sections of the report
- Recorded the dataset and model part of the video

AJ:

- Partially wrote and revised the modules section of the report
- Revised the description and created figure 1 in the report
- Recorded the 3rd part of the video (how the website works)

Thank you for such a great year!
